Top Skills

Dart
Entity Framework (EF) Core
Firebase

Certifications

Essential Excel Skills for Data Preparation and Analysis
Data-Driven Policy Analysis
Analytics Applications in Finance and Risk
Dashboards and Drill-Down Analytics
Data Visualization Fundamentals

Honors-Awards

Thesis of the Year
Web Developer of the Year
Inter-ACLC Web Development Competition Gold Medalist
Inter-ACLC Web Development Competition Silver Medalist

Eugine Jester Jose

Software Engineer | Full-Stack & Cross-Platform Development | Legacy Modernization
Bocaue, Central Luzon, Philippines

Summary

I am a backend-minded software engineer with a passion for building, improving, and modernizing software systems. My journey in software development began with hands-on web development, where I learned to build and maintain applications used in real-world environments. Since then, I have expanded my expertise into backend engineering, API integrations, desktop application development, and cross-platform mobile development.Throughout my professional experience, I have worked across diverse technology stacks and inherited complex systems, specializing in modernizing legacy applications and introducing structured architectures. I believe software engineering is not just about making features work, but about writing maintainable code, designing reliable systems, and deeply understanding the practical problems software is meant to solve.My technical repertoire spans backend systems using PHP, Laravel, REST APIs, and CRM integrations; mobile development with Flutter, Dart, Riverpod, and Drift; desktop solutions using C#, .NET, WinUI 3, WinForms, and Entity Framework Core; and modern web applications leveraging Next.js, TypeScript, JavaScript, and Vue.js. My data layer and architectural background includes working with PostgreSQL, MySQL, and SQLite databases, alongside implementing MVVM patterns, repository designs, and offline-first application architectures.One of the most valuable aspects of my career has been working end-to-end across every layer of software—from databases and core backend logic to user-facing applications. This comprehensive experience allows me to understand how complex systems integrate and how foundational technical decisions impact overall maintainability and user experience.Beyond my professional work, I enjoy building personal projects that explore novel ideas and solve practical problems. My academic journey provided key opportunities to challenge myself, earning recognition as Thesis of the Year and Web Developer of the Year, alongside awards in regional web development competitions.I am continuously learning,

refining my engineering practices, and seeking opportunities to take on meaningful technical challenges. My primary interests include software engineering, full-stack development, backend architecture, cross-platform mobile engineering, and legacy system modernization. I am particularly drawn to teams that prioritize sound engineering principles, continuous improvement, and building software that solves real-world problems.Portfolio: https://eugine-jose.vercel.app/ | GitHub: https://github.com/JesterByte

Experience

Vox Dei Protocol Systems Inc.
Software Developer
March 2026 - Present (9 months)
Quezon City, National Capital Region, Philippines

Overhauled internal mobile update distribution by re-architecting OTA (Over-The-Air) pipelines using Firebase across production mobile applications, eliminating manual client-side updates for operations teams.

Key Contributions & Achievements:
• Modernized Mobile Architecture: Rebuilt a procedural legacy app into a production-ready Flutter app using MVVM architecture, Riverpod state management, Drift (SQLite) offline database, and automated Firebase OTA deployments.
• Desktop System Modernization: Spearheading the architectural migration of a legacy WinForms system into a modern WinUI (.NET/C#) desktop app featuring integrated MVVM patterns and automated OTA updating mechanisms.
• Monolithic Backend Maintenance: Maintained and expanded core functionality on a legacy Laravel codebase deployed on AWS EC2, delivering rapid feature updates while preparing CI/CD workflows via GitHub Actions.

SAABSOFT
Back End Developer
July 2025 - January 2026 (7 months)
Dubai, United Arab Emirates

Automated client **Bitrix24 CRM workflows to streamline real estate lead and deal management processes.

Developed PHP webhooks to extend Bitrix24 functionality and integrate external services based on client requirements.

Built a custom reporting application using Vue.js, integrated directly with Bitrix24 for real-time business analytics.

Implemented automation workflows using Zapier to improve lead management and cross-platform integrations.

Diagnosed and resolved CRM configuration and workflow issues for clients.

Advised businesses on best practices for optimizing their Bitrix24 CRM processes and automation strategies.

Roman Catholic Diocese of Malolos

Programmer

March 2024 - August 2024 (6 months)

Bocaue, Central Luzon, Philippines

Contributed to the development of a Digitized Church Records Management System to transform physical parish archives into a centralized digital database.

Helped build tools that streamlined the management, storage, and retrieval of church records for parish staff.

Assisted in developing the online requesting platform Sacramental Records Online Request, enabling parishioners to request official church documents through web and mobile devices.

Supported system improvements to enhance accessibility, efficiency, and digital record management across participating parishes.

Education

ACLC College

Bachelor's degree, Computer Science · (September 2022 - June 2025)

Immaculate Conception I-College

Bachelor's degree, Computer Science · (August 2020 - June 2021)

ACLC College

Bachelor of Science, Computational Science
